

Mortality (Catch Curves)

Exercise - Walleye

-
1. Load the `WalleyeErie2.csv` file into a `data.frame` object and restrict the data to Walleye captured from location 1 in 2013. Attempt to compute the annual mortality rate from these data. Describe any difficulties that you encounter.

-
2. Load the `WalleyeErie2.csv` file into a `data.frame` object and restrict the data to Walleye captured from location 1. Create a `data.frame` that contains fish from the 2003 year-class captured across many capture years. Attempt to compute the annual mortality rate from these data.

-
3. Repeat the previous questions but for another year-class with sufficient data.
-
