

Mortality (Catch Curves)

Exercise - Nunavut

-
1. Load the `PG008_original.xlsx` file into a `data.frame` object and restrict the `data.frame` to Arctic Charr captured in *freshwaters* in 2007. Attempt to estimate the annual mortality rate from these data.

-
2. Repeat the above question but with the data from 2002.

-
3. Statistically determine if there is a significant difference in the instantaneous mortality rate between Charr captured in 2007 and 2010.
-
